ABDLINE-98070426; But and a matrix protein of trom shell and pearl nacre of Haliotis rufescens.";

J. Balol. Chem. 273.2472-23481(1997).

THE SHELL. MAY ALSO PERFORM OTHER FUNCTIONS SUCH AS INTERACTING WITH POLYANIONIC ARGONITE-DETERMINING PROTEINS, PROTEING THE PROTEIN COMPONENTS OF THE MATRIX PROM DEGRADATION, AND CONFERRING ELASTIC RESILIENCE TO THE MICROLAMINATE COMPOSITE OF THE SHELL.

SUBCELLULAR LOCATION: EXTRACELLULAR, SYNTHESIZED AND SECRETED SPECIFICALLY BY THE MANTLE PALLIAL CELLS.

SPECIFICALLY BY THE MANTLE PALLIAL CELLS.

ODMAIN: THE PROTEIN CONTAINS TEN HIGHLY CONSERVED CYSTEINE-RICH DOMAINS

COMMAIN: THE PROTEIN CONTAINS TEN HIGHLY CONSERVED CYSTEINE-RICH DOMAINS

"A novel asparagine-->aspartic acid mutation in the rod 1A domain in Keratin 2e in a Japanese family with ichthyosis bullosa of Stemens.";
J. Invest. Dermatol. 114:193-195(2000).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIEMENS (1BS), A RARE AUGSOMAL DOMINANT DISORDER DISPLAYING A SIEMENS (1BS), A RARE AUTOSOMAL DOMINANT DISORDER DISPLAYING A SIEMENS (1BS), A RARE AUTOSOMAL DOMINANT DISORDER DISPLAYING A STEEMING FROM BIRRH. HYPERKERATOSES AND SHEDDING OF THE OUTER LAYERS OF THE EPIDERMIS (MOLTING) ARE OBSERVED IN LATER WEEKS. MISCELLANBOUS: THERE ARE TWO TYPES OF CYTOSKELETAL AND MICROFIBALLAR KRATIN: I (ACIDIC, 40-55 kDa) [K9 TO K20] AND II (NEUTRAL TO BASIC; 56-770 kDa) [K1 TO K8].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DEVELOPMENTAL STAGE: SYNTHESIZED DURING MATURATION OF EPIDERMAL KERATINOCYTES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -i- FUNCTION: PROBABLY CONTRIBUTES TO TERMINAL CORNIFICATION.
-i- SUBUNIT: HETEROTETRAMER OF TWO TYPE I AND TWO TYPE II KERATINS.
-i- TISSUE SPECIFICITY: IN THE SUPRABASAL LAYERS OF EPIDERMAL
TISSUES FROM MOST BODY SITES, EXCEPT IN FORESKIN, IN SQUAMOUS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PROSITE; PS00226; IF; 1.

-!- POLYMORPHISM: A NUMBER OF ALLELES ARE KNOWN THAT MAINLY DIFFER IN THE GLY-RICH REGION (POSITIONS 490-560).
-!- DISEASE: DEFECTS IN KRT10 ARE THE CAUSE OF EPIDERMOLYTIC HYPERKERATOSIS (EHK) (ALSO KNOWN AS BULLOUS CONGENITAL ICHTRYCSIEORE REYTHRODERMA (BCIE)); A HERBITARY SKIN DISORDER CHARACTERIZED BY BLISTERING AND A MARKED THICKENING OF THE STRATUM CORNEDW. AT BIRTH, AFFECTED INDIVIDUALS USUALLY PRESENT WITH REDWESS, BLISTERS AND SUPERFICIAL EROSIONS DUE TO CYTOLYSIS. WITHIN A FEW WEEKS, THE ERYTHRODERMA AND BLISTER FORMATION DIMINISH AND HYPEKKERATOSES DEVELOP. TRANSMISSION IS AUTOSOWALD DOMINNAT, BUT MOST CASES ARE SPORADIC.
-!- DISEASE: DEFECTS IN KRT10 ARE THE CAUSE OF ANNULAR EPIDERMOLYTIC ICHTHYOSIS (AEI), A DISTINCT PHENOTYPIC VARIANT OF EPIDERMOLYTIC HYPERKERATOSIS. IT RESEMBLES CLINICAL AND HYSTOLOGIC FEATURES OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Arin M.J., Longley M.A., Anton-Lamprecht I., Kurze G., Huber M.,

SwissProt_40:*

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
